

PROJECT 3 - EXPLORATORY DATA ANALYSIS PROJECT

RAJ MANI

arulmanir@gmail.com

For this project I choose Loans data set and did explore number of variables related to getting lower APR for loans and also to correlating factor to prospect risk score listed in the data set. Here is my preliminary assessment of data :

Data set has over 100 K rows and did use Rstudi to load the datasets and used various packages and techquies used in the lessons. I also tried to use a basic prediction method to predict risk factor using the available variables (still not done with all kthe variables).
